

Project 1 Summary

The web application is called VTessential.com. The web app is to provide the student and staff of Virginia Tech with all the essential goods and services required for their apartments or dorms. The portal provides everything from home essentials such as furniture, kitchenware, bedroom essentials, toiletries, etc. to college essentials such as Hokie T-shirts, classroom essentials, sports goods, and much more. We will even help the students with technology such as laptops, computers, and other electronic devices that will be beneficial for their coursework. Everything will be delivered at their doorsteps so that they don't need to wander around different places to find each and everything for their house as well as college.

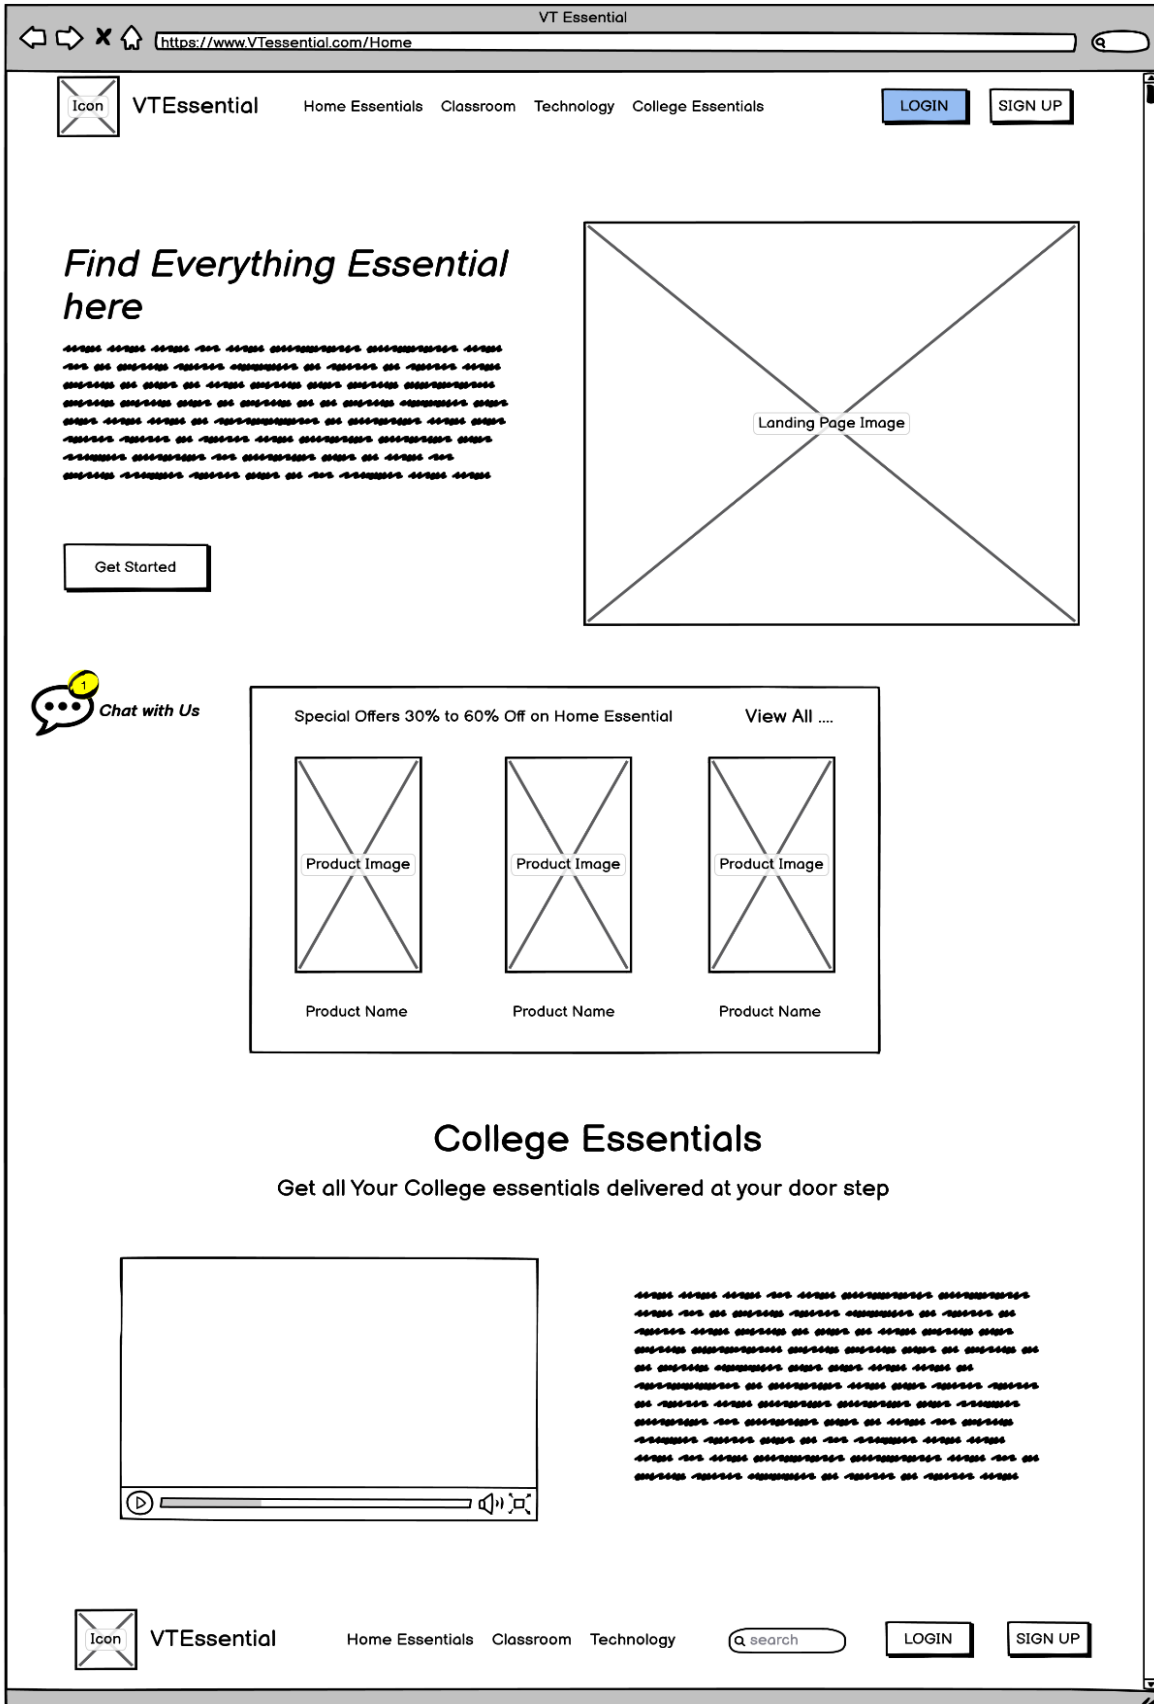

The Idea of the web app is to help our fellow Hokies to settle in their apartments and dorms without any hassle and stress. We would aim to provide as much help to the students as well as the faculty of Virginia Tech.

This Web app's main audience is the students, faculty, and staff of Virginia Tech. Although anybody outside of Virginia Tech can buy our products our fellow Hokies are given special student discounts and privileges.

The user can search items based on their categories such as kitchen, bedroom, college essentials, classroom essentials, etc. We also provide pre-assembled bundles which make it easy for students to select items. As kitchen bundle has all the utensils and kitchen supplies that one would need. The user can chat with us with the help of the chat icon which will always be available on the left corner of the page. Hokies get special offers and discounts when they would provide all the correct details.

Home Page

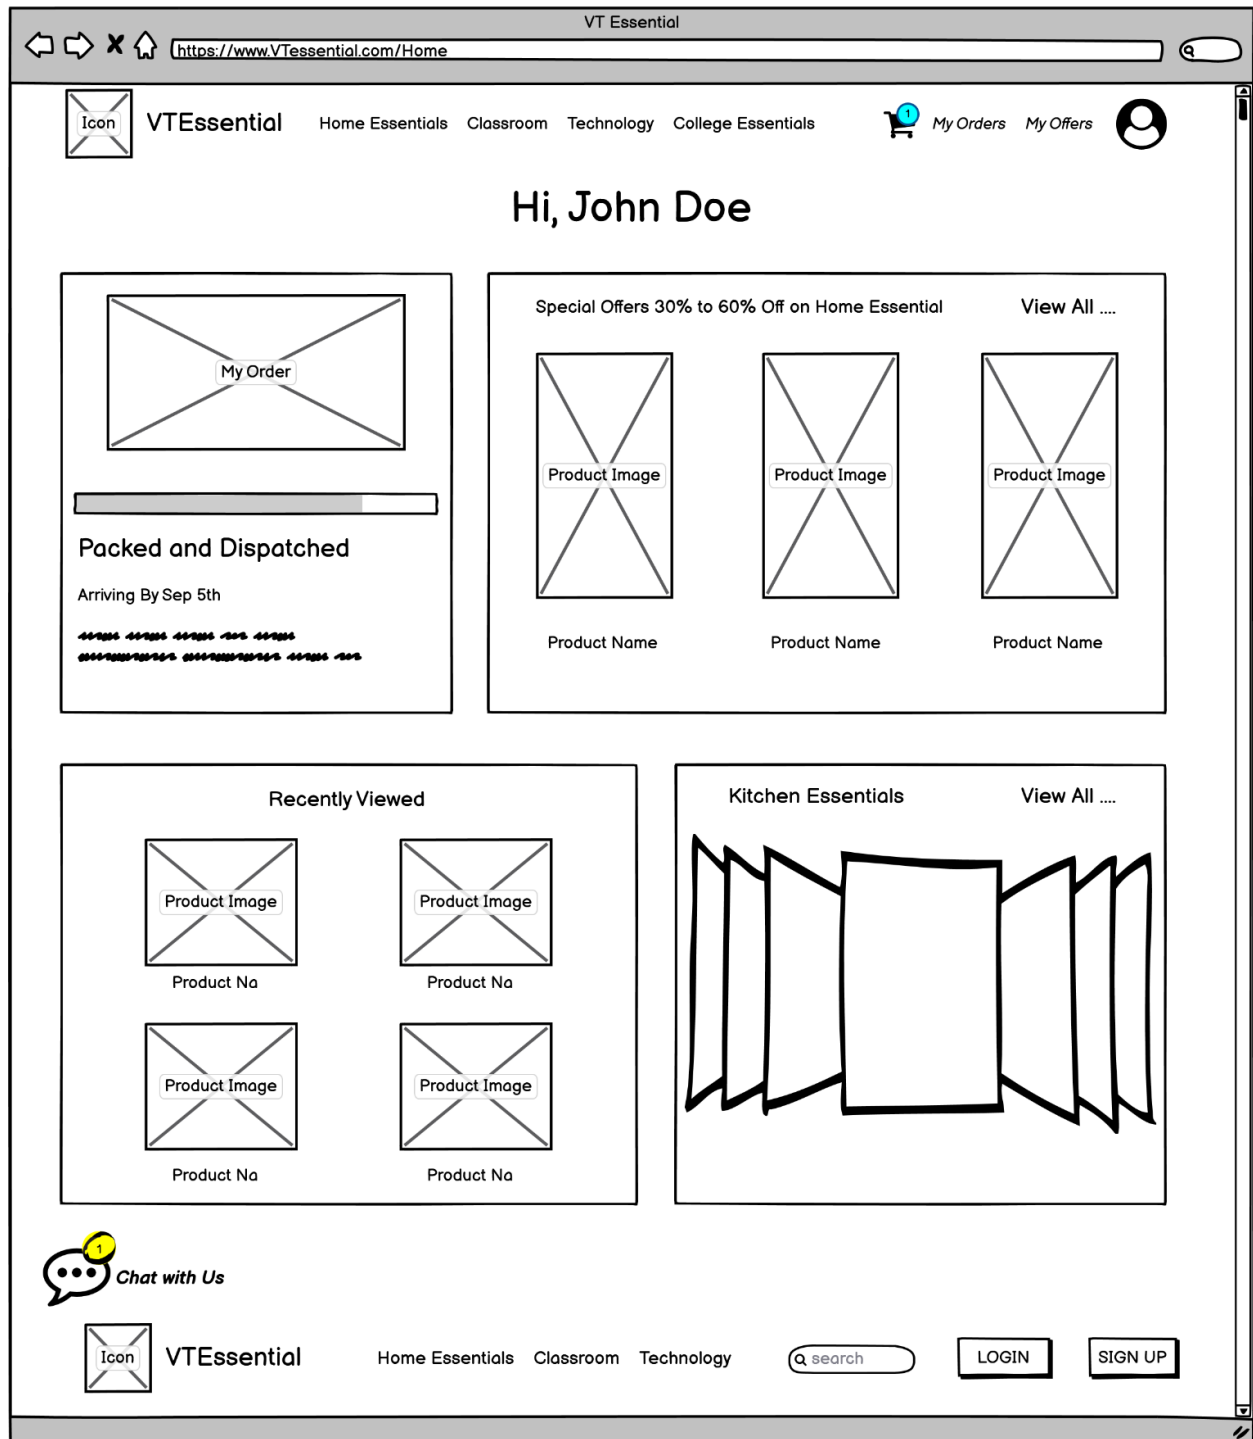

This the main landing page when the user has not login into their account/ when a new user has arrived to the portal.
The user can view all the different items they can find different offers and essential goods based on there need

Home Page Alternate Version
